Manual QA analyst with two years of experience contributing to IT projects with the execution of requirements analysis, creation and execution of functional and non-functional test cases that ensure the quality of the software. I am currently training in automated testing to complement my work. Every day I strive to grow and create an impact in the lives of others through technology.

## EXPERIENCE

### **Protos Technology, QA Analyst**— June, 2021 - Present

- Implemented test case plans that cover the different stages of the life cycle of the software under development.
- I provided some improvements in terms of software functionalities that optimize the user experience.
- I wrote user manuals with the intention of facilitating the understanding of the use of the software by the end user.
- Implementation of functional and non-functional test cases to ensure software quality.
- I was in charge of writing User Stories to understand the implementation of new requirements.

**Tech Stack:** Jira, Trello, Figma, SCRUM methodology, CSS, HTML, Loom, Zephyr Scale.

### **Software Tester, Cromatik media** — December, 2020 - Present

- I carried out the requirements gathering for the Move Venezuela mobile application.
- I created a compendium of test cases for each module.
- I indicated contributions to improve the usability of the application.
- I implemented Smoke Test type test cases, Sanity Test, regression tests to different modules of the application.
- I create the prototype for the design refactoring

**Tech Stack:** Jira, trello, HTML, CSS, Figma, Cypress.
